

Name	What credits/tools would help you be your most creative self?	What industries/spaces are you most interested to build in/explorer?	Neo.com bio, or "What makes them awesome" as answered by a Neo friend :)
Adarsh Gadepalli	OpenAI API Credits + GPU compute credits	AI + biotechnology (Chai, Topos Bio, New Lantem)	Adarsh is a great technical thinker and also personable. He is very curious and takes the shape of his environment, so being around the Neo folks will be a huge muse of inspiration for him.
Advait Mayhath	OpenAI/Anthropic credits, Warp credits	Education, Dev Tools	Advait Mayhath , Software Engineer, Warp Advait is a Software Engineer at Warp. He's a Waterloo 23 BCS graduate. He's interned at Ramp, Google, Octant, Instabase, Riot & Social Capital. His interests include dev tools, bioinformatics, gaming, Esports, Python & hackathons (organized JAMhacks, Starterhacks & Hack the North! He also loves to travel (>20 countries), read, ski, go for long runs outside + adrenaline sports such as hot skydiving, white-water rafting, parasailing, bungee jumping and scuba diving
Albert Lai	open ai, anthropic, cursor	education, social good, biotech	Albert Lai , Software Engineer, Celdera Albert is a Software Engineer at Celdera currently on a gap year from the University of Waterloo. Previously, he's interned at Faire & Shopify and helped organize Hack the North. In his free time, enjoys hiking in national parks.
Aleks Gurtuz	design software, etc.	Mainly hardtech, but I am definitely interested in exploring beyond that	Alexander Gurtuz , MIT Aleks is a second-year aerospace student and an intern with SINTEF Industry in Norway, where he develops systems for drone operators to locate unvisited orance and support remediation. Recently, he was awarded the Course XVI 2025 James Mearns Memorial Award for excellence in space-systems engineering, and he spends his free prototyping, designing, and experimenting. He is exploring on satellite data management and shiffing computation from the ground to orbit for environmental disaster detection. Aleks has played cells for a decade--he admits that every good game begins with music playing in the background.
Alex Fan	Compute credits and access to coding agents will help me maximize my productivity	I'm most interested in working in cybersecurity, architecture co-pilot, and video generation.	Alex Fan , MIT Alex is a prior studying Math and AI at MIT. Previously a USACO Finalist in high school, he then founded the MIT Informatics Tournament. Professionally, Alex interned at Palo Alto as the leadman summer, where he focused on generative video models for 3D camera movement control. Alex also interned at Jane Street, where he worked on GPU performance engineering on ML models and distributed systems. Beyond CS, Alex is a Pol Sci minor with a passion for government and public service.
Alex Novello	AWS, OpenAI, Claude	Interested in code gen problems, browser & computer use agents, RL, etc. Would be excited to work with any - Graphite, Cognition, Warp, or all come to mind especially!	Alexandre Novello , Backend SWE intern (FDS Team), Cornell / Ramp Alex is currently a backend software engineer intern at Ramp, working on building new machine learning and AI systems for automatic recolor retrieval. Alex studies CS & Math at Cornell and is engaged in ML/AI research on campus. Alex is also actively building his own AI music education startup venture, Subto. Last but not least, Alex loves golfing, skiing, traveling around the world, and is passionate about wildlife conservation!
Alicia Li	GPU credits and OpenAI API credits	I'd love to work with OpenAI and Cognition!	Alicia Li , ML Researcher, Massachusetts Institute of Technology Alicia is an MIT junior. At Genase, she applied RL techniques like DPO, DSPO, and GPOPO to optimize the physical plausibility of poses generated by a diffusion-based colliding model. She published a NeuPS workshop paper where she created & implemented a new robot planning + learning algorithm. Currently, she researches efficient and expressive NLP architectures. Beyond classes/research, she loves to dance and read sci-fi. Alicia is always down to grab matches together--but feel free to reach out!
Alior Sahoo	Claude/OpenAI/Lovable	Hacking with Sway!	Alior Sahoo loves all things public policy, tech, and chemistry. An MIT senior studying computer science and writing (yes, writing), he previously interned at Uber as a SWE/ML and now works on AI governance research. He's fascinated by social connection platforms and loves talking about his novel-in-progress (if you let him).
Ameya Jadhav	api credits		Ameya Jadhav , Investment Intern, Stanford University Ameya is a senior/master's student at Stanford studying CS (AI Systems). He's worked at OpenAI, Neo, various fintech startups, and more - he enjoys product/AI engineering in these roles and beyond. At Stanford, he runs Stanford TreeHacks and Cardinal Ventures. Outside of school, you can find Ameya playing poker, D&D, or trying new restaurants. He's also trying to get into skiing more :). More info at www.ameyajadhav.com
Anand Agrawal	api credits	aviation	Anand Agrawal is a senior/master's student at Stanford studying CS (AI Systems). He's worked at OpenAI, Neo, various fintech startups, and more - he enjoys product/AI engineering in these roles and beyond. At Stanford, he runs Stanford TreeHacks and Cardinal Ventures. Outside of school, you can find Ameya playing poker, D&D, or trying new restaurants. He's also trying to get into skiing more :). More info at www.ameyajadhav.com
Andy Xu	Voice AI (Elevenlabs/Vapi), Modal, Fireworks, Claude/Claude Code, AI For Science	Solving long horizon tasks for multi-agent systems, RL, Environments, AI For Science	Andy Xu , Student, Harvey Mudd College Andy is studying CS & Math at Harvey Mudd College, applying ML towards physical systems. Currently, he works on post training LLMs to make them better at LLaVA (e.g. deep tech, AI dev tools), building SOTA algorithms for log parsing. He also leads Graphite Digital, a consulting org working with IBM on synthetic data generation for LLM fine-tuning. In his free time, Andy loves brewing, list, playing tennis, and reading sci-fi.
Angela Busheska	OpenAI/Claude, Pika/Video (for creating a good launch video)	Hardware AI, RL Environments, Kalshi/Prediction markets	Angela Busheska , Lafayette College Angela pursued a dual degree in EE & CS, with a minor in Math, at Lafayette College. She has interned at Google Gemini, Microsoft Research, DeepMind, Bloomberg, Argonne Health and GAP. Additionally, she founded EnRoute, a private tech nonprofit that expands the environmental impact of fast fashion supply chains. EnRoute was named one of the Top 100 Environmental Impact and the Shown Mendes Foundation, and recognized by Forbes and Statista. In high school, Angela competed in math & physics. She was the leader of the Macdonian team to IYPT.
Anika Somala	openai, anthropic, cursor, lovable, langchain, vercel	through pretty separate, some things I've been noodling around with are rethinking how developers interact with AI code generation, and creating hyper-personalized experiences through behavioral modeling	Anika Somala , Software Engineer Intern, LangChain Anika is a junior at Columbia studying Math and Computer Science. She is currently taking a semester off to research and build AI onboarding agents for LLMs. She leads research at Columbia AI Alignment Club and previously worked on generative video models at Pika. She loves playing tennis (and has competed at Wimbledon), snowboarding, and house music. More at anikasomala.com
Anish Ganga	N/A	Seey	Anish Ganga , Lafayette College Anish is studying Data Science and Public Policy at UC Berkeley. Interested in the intersection of social good and technology, he has worked at AI regulation research, product research at JusticText through a fellowship at True Ventures, and investigative work at the UC Berkeley Human Rights Center. He wants to explore any field of technology for social good and loves learning about new applications across disciplines. Outside of work, he enjoys racing, experimenting with cooking, and watching reality TV shows.
Anthony Wang	claude api/gpu credits	music, genetics, test time learning	Anthony Wang , NVIDIA Anthony is currently working on large-scale AI training at NVIDIA. Previously, he's published RL research with LLMs at Scale AI as well as at UT.
Anush Muthyala	Gemini API, Claude API, Groq credits	Biotech/Robotics/Hardware. Neo portocs of interest: Aco, Cobot, Turtle Intelligence.	Anush Muthyala , n/a, University of British Columbia Anush is a rising sophomore @ UBC who is mastering his craft at the intersection of hardware, ML, and neuroscience. Currently, he is an electrical engineering intern at Science Corporation, where he is building the iPod for brain data to automate hardware testing of neural implants. Outside of work, he runs UBC's Hack4Bio club, a student-run and open-source microbial machine kits for fun. In his free time, you'll find him exploring SF with his skateboard or reading unhealthy amounts of wikipedia.
Aryo Patel	Gemini 3.0 access + credits T_T	AI agents for SOX audits	Aryo Patel is one of the co-founders of Andora, where they are building reliable AI agents to automate financial audits. He dropped out of MIT where he studied math and was involved with algo trading and music events. Now, Aryo spends most of his time optimizing semantic reasoning over complex unstructured data, and trying to convince the team to get an office with a shower so he can run to work in the morning.
Asher Parker-Santor	OPUS (LLM api key/credits)	AI Agents	Asher Parker-Santor is a junior at MIT, where he studies math and AI (but enjoys physics classes more). In the past, he has mostly worked on AI research--posttraining diversity, narrow AI, interpretability, and control. More recently, he's thought a lot about neuroscience, learned quantum mechanics and music theory, and become more involved in the startup scene. He really likes trees, cats, and long walks.
Audrey Acken	ok dumping a ton for all possible projects: claude credits, openai, groq, cerebras, cloudflare (if hardware: 3d printers, raspis/peps, soldering, laser cutters, shapers, drive motors, servos, etc) and also any form of caffeine	biotech, social	Audrey Acken , computational neuroscience, interpretability, drawing/art/typos, coffee
Ayush Paul		ai, hardware, possibly crypto	Ayush Paul , run berkeley's startup incubator! very sharp, excited to see what they build
Bob Summers		Cursor for Voice Agents	Bob Summers , Founder / Investor, Goodstart Bob is the founder of Goodstart, an AI business assistant for 10,000+ local businesses which was incubated in Area120 @ Google. Born to 2 computer scientists, Bob had his first piece of software at age 14 - and taught his code for a car. Bob is alumn of TJHSST, Virginia Tech, MIT and Google. He has 2 kids (ages 13 & 15 Harter Eagles) who share his passions for snow and wave riding.
Brian Travis	Cursor, Claude Code	AI, Dev Tools, Enterprise / SaaS, FinTech, Hardware / Robotics, Productivity.	Brian Travis is a senior at UMICH studying CS and math and has interned at Ramp 2 summers and once while taking classes at school. He enjoys software engineering topics from distributed systems, to frontend engineering, to product design. He's been one of eight featured designers at Figma, Confluent 2025, AI UMICH he helped restart and later led Minicube, one of the OG collegiate hackathons.
Charlie Meyer	cursor/claude code credits, some sort of cloud compute credits (pf compute, modal, triler)	openai, something with coding agents, RL, or agents in general	Other interests include filimg, ju/jazz, photography, videography, motion graphics, hiking at national parks, teaching, and trying new things. NYC >>> SF
Chris Moser	Modal, netluis, openai	Something with open source models or small models that can run on the edge	Chris Moser , University of Virginia Chris is currently in the first Neo Scholars gap semester program spending his time getting really good at RL. He's interested in RL, scaling ML systems, and design. This July he completed SF marathon and is looking to do it again in 2025!
Christopher Park	API credits (OpenAI, Claude, etc) and compute credit. And lots and lots of coffee + catz :)	AI/ML, Infra, Consumer/Softw, Web3, Climate/Energy (Aeskar)	Chris is founding engineer and swiss-army knife at Dryfl. Before, Chris built up the AI unit at a german scale up and built driver matching algorithms at Kule. He holds a Master's in Electrical Engineering from TUM and was a Fulbright scholar at UC Berkeley, specializing in AI. During his studies, he patented a novel AI method for classifying brain tumors from 3D MRI scans.
Claire Wang		bio/neurotech, music, games, education	Christopher Park is a sophomore studying CS at Berkeley. Super interested in solving physical intelligence + exploring applied ml, quantum computing, and multi-faceted projects. He conducted digital twin research in the U.S. Army in high school and later worked on multimodal workflow-interp at UCSF. Recently, he's worked on creative tooling at Adobe over the summer, while interoperting in SF. On his off days, you'll find him swimming laps at the pool, editing videos, and playing NYT games.
Connor Fogarty	Modal, Vercel, OpenAI/Anthropic/Gemini	Codegen, no-code builder tools, dev tools	Claire Wang , MIT Claire is interested in all things brain, ML, and the combination of the two. In neurotech, she is currently a junior at MIT after a gap semester at EIT Lab, working on mapping the brain. She's also quite interested in therapeutics and interesting AI research directions. Beyond that, she lives and breathes music and will talk your ear off about any artist or genre you like.
Cooper Saye	OpenAI credits + Devin access + Kalshi API access would be fun!	Open to anything, but curious about financial infrastructure. Would love to play around with some of Kalshi's services	Connor Fogarty , Software Engineer Intern, Fiat Connor is an incoming junior at Stanford where he studies CS, runs partnerships at Cardinal Ventures (student-led VC), and co-directed TreeHacks 2025. He is currently working at Fiat, an AI-powered marketing agent for growth-stage startups, where he builds agents for web crawling and codegen. Last summer, he was at StackBilt where he built bolt.new. Connor would love to go on a scenic ride with you, he finds his missing bike.
Daniel Kyle Zabo	OpenAI/Anthropic credits, Lightning AI credits (or Modal/Lambda Labs/etc.)		Cooper Saye , Software Engineer, University of Michigan Cooper was previously Ramp's youngest senior engineer, building the fastest-growing 3rd payment platform in America. He was also Chief of Staff at Contrary and an intern at Jane Street. He attends the University of Michigan, studying computer science and mathematics, and enjoys calisthenics and long-distance running in his spare time.
Danny Leytson	Anthropic/Claude Code	AI voice journaling	Daniel Kyle Zabo , Brown University Daniel is a junior at Brown studying Applied Math. He tackles the hardest problems in deep tech--currently interning at Aeolus Labs, where he's developing algorithms to control turbulent flows and forecast extreme weather. On campus, he researches interpretability of generative modeling, writes about tech and composes music on the side. He's passionate about startups, world, reading and jazz.
Darryl Day	Cursor/OpenAI/Claude credits	Consumer	Danny D. Leytson , CTO/Co-founder, Milwaukee Danny is the CTO and Co-founder of Milwaukee, an AI voice agent platform to automate data-gathering phone calls, from surveys to mistakes. Prior to starting Milwaukee, he worked at Three startups and did fundamental AI research at UPF in Barcelona. He studied computational statistics at UCLA and AI at UPF. When he's not building the AI voice agent at the heart of Milwaukee's product, he's probably reading sci-fi, lifting heavy weights, or dancing.
David Adebojun	Claude, Cursor, Figma	Notion, Datto, Media Tech/Music Tech, Real Estate	Darryl Day , CTO, Caratrain A builder at heart, he co-founded and served as CTO of an augmented reality startup that was acquired by Cadence Design Systems. Over the past decade, he's worked across cutting-edge domains including self-driving cars, brain-machine interfaces at Neurality, and holographic displays--winning two U.S. patents along the way. He was recognized as one of Atlantic Canada's 30 Under 30 for his contributions to tech and innovation. He also helped develop the world's fastest air bearing hyperloop pod for the SpaceX Hyperloop Competition, with Caratrain's CEO, Josh. Darryl brings deep product and engineering expertise to every venture he leads and serves as the CTO of Caratrain.
Deniz Birlikci	Claude	unsure! would love to design a way to implement online RL in a product	David Adebojun is my best friend and one of the most startup-earlystartups-passionate people I've ever known.
			Deniz Birlikci , Member of Technical Staff, Amazon AGI Deniz's building a universal AI agent with Amazon AGI (formerly Adopt). He's a researcher working on Reinforcement Learning. Deniz graduated from Carnegie Mellon with his Bachelor's in AI, during which he co-founded his own startup, taught 1000+ students as a head TA, and had a stint working race strategy with Mercedes F1 team. Deniz grew up in Istanbul, Turkey. He loves to run, hike, and listen to Fred Agn.

Name	What credits/tools would help you be your most creative self?	What industries/spaces are you most interested to build tomorrow?	
Denys Inuh	max planck for claude 2.1x	applied AI agents, scraping, search.	Neo.com bio, or "What makes them awesome" as answered by a Neo friend :) Denys Inuh, SWE, Endex, UniforBio Denys is just a random dude. Right now he is doing an internship at Endex. Goes to UniforBio, pretends to study CS. Went on a semester to NUS in Singapore, travelled, almost failed to find a single internship so posed as a normal in Vietnam for a semester. Has been in the US for 2 months in the last 6 months, so he hardly no one can even confirm that he is from there. Was born in Ukraine, moved to Canada, finished high school there. Started programming around -12, worked on and abandoned countless projects. Since 19 has been interning in different startups in NYC, but have walked every sidewalk in SoHo at this point.
Emily Han	OpenAI, Cursor, Modal, Claude, LangChain, Cartesia	Dev tool or design	Emily Han, LLM Inference @ Modal, Stanford Emily is a rising junior at Stanford studying CS (AI & Systems). She has a passion for product, design, backend infra. She's currently working on LLM inference at Modal and previously worked on product engineering at a few seed stage startups including First. She also co-edited <i>Treehacks 2023</i>. Emily grew up in Shenzhen, China and moved to the Bay Area when she was around 10. She loves drawing, exploring museums, watching films, visiting new matcha cafes, and posting on BeReal!
Emily Park			Emily Park, UC Berkeley Emily graduated B.S. in computer science from UC Berkeley. Previously she worked on computer vision & NLP research at DOD and built on a startup on market and data predictions. She also lives in San Francisco and goes hiking outdoors, playing piano and exploring new things.
Faisal Sajadi	Open AI credits, Anthropic credits	I've been playing around with reverse engineering Message and building local LLMs with context around your computer. I'd love to go deeper into it, mainly around computer use and personal AI agents	Faisal Sajadi, Software Engineering Intern, Wipac Flow Faisal is currently working as a software engineering intern at Wipac AI. He is also currently an incoming 2nd year student at the University of Waterloo where he is pursuing Software Engineering. In the past, he has been a part of various startups at a pre-seed stage and has seen them grow on to raise a Series A.
Ginran Abdullin	Cursor, Claude Code, Modal, Warp (and other basic stuff)	will figure out how fits our team best!	Ginran Abdullin, MIT Ginran is a x2 CGI gold medalist. He studies Math & CS @ MIT and aims to be maximally useful to the world.
John Schneider	Any will do	Ocant, My brother is a PhD pharmacologist and we are interested in writing Linear Mixed-Effect Models in QUDA. I love writing libraries for scientists	John is the tech lead for the Sirex of Egypt. He also works for CareBrain. He started as a double major in Japanese Literature and Computer Science, and got his backend skills from being on the release team of the PlayStation 5. Once his favorite director left PlayStation he was offered a role at starting Accol's first startup in North Africa, and took it.
John Xu	Open AI credits, access to rapid prototyping tools (3D printing)	I love AI agents and vertical SaaS. Working for Zach Finkel at his secret NY office would probably be the dream. I really like Ramp Labs, Cursor, and Chai Discovery too. None of them take interns so I'm getting crazy and seeing how I can prove myself before summer :)	John is a builder, YouTuber, and engineering student at MIT. Last year, he represented Canada at the European Space Agency for CarSat. John is currently working on an autonomous flying umbrella as well as attempting to break the 360mph record for the world's fastest drone.
Joseph Jojee	Claude Code, OpenAI, OpenRouter, Redix, AWS, Pwn, Figma, Adobe Suite, Temporal, Streamlit (this is just me blurring!)	I love AI agents and vertical SaaS. Working for Zach Finkel at his secret NY office would probably be the dream. I really like Ramp Labs, Cursor, and Chai Discovery too. None of them take interns so I'm getting crazy and seeing how I can prove myself before summer :)	Joseph Jojee, Special Projects Intern @ Elad Gil, Columbia University Joseph is a rising junior at Columbia University studying Computer Science and Applied Mathematics, currently working on special projects as an intern with Elad Gil. He previously worked as Intern #1 at Eric Schmidt's Renaissance Philanthropy and founded a predictive analytics startup. In his free time, Joseph loves to work with think tanks and play electric guitar very badly.
Josh Nash	Cursor/OpenAI/Claude credits	Consumer	Josh Nash, CEO, Carebrain Josh is a sales & marketing leader who has closed several multimillion dollar health tech deals, with an exit to a publicly traded company for a prophetic SaaS startup where he landed the 3 largest prophetic companies in the world. He has professionally advised Facebook on ad optimization, as well as Under Armour and Carbon 3D on international go-to-market strategy. He also won 2021 Vimeo Brand Video of the Year and Adobe Illustrator's Prok. His first startup engineered snow melt for the world's ski resorts in Banaskantha, India, Buan, South Korea, and at Big Island, Hawaii.
Jude Partovi	Anthropic, OpenAI, Warp, Cursor.	Productivity/personal agents	Jude Partovi, Harvard Jude is a builder intent on creating stellar products in the new age of AI-assisted human-computer interaction. He currently works at Cogpoint on GTM and enterprise engineering and has previously worked at Bubble and Gavel (both Neo portfolio). Jude studies CS (and miscellaneous other stuff) at Harvard, and he would love to a) jam with you on guitar, b) play some pickup volleyball, or c) hear your favorite records :)
Julian Dai	LLM credits	I guess Eva would be the closest company to my idea. I'm not sure if they're a Neo company though.	Julian Dai, Software Engineer, Ramp Julian is rising senior at Columbia. This summer, he interned at Ramp, and in September, he'll be returning to NYC to be a full-time engineer. Julian first got into startups while building an ed-tech product, and is interested in health-tech, context engineering, and RL. Outside of work, he really loves to travel to new places and spend time with friends.
Jyoti Rani	mentorshop!	healthcare/edtech	Jyoti studied EECS & Business at UC Berkeley M.E.T. and leads Berkeley's AI incubator. She's worked on quantum computing applications at IonQ (first public company in quantum). Currently, Jyoti builds agentic workflows in healthcare. She enjoys meditating especially at monasteries in Rishikesh, India, Buan, South Korea, and at Big Island, Hawaii.
Katherine He	access to openai apis, bio/other datasets	applied AI, health/neuro, gov/defense	Katherine He, Ethical Yale Katherine is working on LLM accelerator chips at Ethical. During her three years at Yale, she conducted ML research, engineered gov/legal-tech products, ran two policy fellowships, and dabbled in health-tech venture.
Kevin Yang	OpenAI credits	Creative tooling	Kevin Yang, Harvard University Kevin is a sophomore at Harvard studying electrical engineering and philosophy. He recently started FortyFive Labs, a frontier research lab developing embodied intelligence through synthetic data. In his free time, you can find him bounding on the Charles, playing pickup basketball, doing a house party, or grilling with friends.
Krish Chopra	OpenAI/API credits, Anthropic/API credits, Cursor Pro, Figma	Interested in building in the education space (as well as fintech + medtech)	Krish Chopra, SWE Intern @ Suno, University of Waterloo Krish is a Computer Science student at the University of Waterloo, specializing in AI and Business. He enjoys engineering innovative solutions to real-world problems through software projects, hackathons (he's been to 16 and counting!), as well as working at cool startups. He's particularly interested in the education space - a goal of AI for consumers. When Krish isn't coding, you can usually find him singing karaoke, playing badminton, or practicing magic tricks/reading minds.
Leah Vashenko	OpenAI/Cursor/Claude, Google Cloud	AI, design/productivity tools	Leah is in her second year at UChicago studying Computational and Applied Math and Philosophy. She's been around computers for as long as she can remember and thinks they are magic. At UChicago, she works on an FPGA-based data processing system for PLUSE, an experimental laser communications satellite. She's also always tinkering with some personal project — some of which have seen :) In her free time, you'll find her building or cooking at a concert (talk to me about music!)
Leon Pattakhov	AI Coding Agents/Development tools such as OpenAI Credits / Claude Code.	No project idea at this time but I think something in the Developer Productivity space would be fun.	Leon Pattakhov, Software Engineer, Amazon Leon is a Software Engineer at Amazon. He studied Computer Science at the University of Waterloo. In the past he has interned at Amazon, Shopify, Fleet Complete, Blackberry, Fair Ventures Labs and Turku. He is passionate about organizing hackathons; he co-founded JAMHack and has organized StarterHacks and Hack the North. In his free time Leon loves to be fun, travelling and documenting his adventures with his camera.
Luxi Mattick	Maybe some physical hardware / electronics equipment?	No ideal. Excited to figure it out :)	Luxi, coolest programmer I know - was at neuralink but recently left to do her own thing and just has a lot of opinions about everything. @gnrigne on twitter and socials.
Mason Wang			Mason Wang, Stanford Mason just stepped away from CTIO and co-founder of Tide Research, where he spent the last year out working on AI interpretability (fed engineering) + infra backed by Khosla Ventures). He's now taking time to explore different domains and problems; might end up finally starting Stanford. When not being a nerd, probably playing basketball, drawing, or building Star Wars Legos!
Max von Storch	cursor, openai	automating manufacturing processes automation in the music industry, especially managing and finding talent	Max von Storch, Applied AI Engineer (intern), Watershed Ouwaton (Tom) is an engineer passionate about climbing skill curves and persistent personal growth who hopes to become a leader and visionary in the world of technology and entrepreneurship. He has served as the managing director of the Quant Club at Notre Dame, vice president of Notre Dame's CodeStack chapter, and a columnist for the university newspaper. Currently, he's building AI to help the planet get to carbon neutral as quickly as possible. In his free time, he enjoys reading, exercise, and playing basketball. Above all, he is an obsessive learner.
Meron Belachew	OpenAI/Claude, Convex.	Open, Neo companies: Flint, Vaino, Sapient, Sway, Cursor, Cogpoint	Meron Belachew, SWE Intern @ Google/YouTube, Columbia University Meron is a rising senior at Columbia studying CS. She's interned at Google Ix (YouTube & Android/Disclaimer), and at Remot, an AI home renovation startup. Meron was also president of CORE, Columbia's leading entrepreneurship organization that reaches over 1000 Columbia students. She enjoys early morning hikes with many friends and music.
Michelle Qin	cursor, claude	multimodal AI	Michelle Qin, OpenAI Michelle works at OpenAI after graduating with her BS & MS in Computer Science on the AI track from Stanford University. She lives in San Francisco and loves meeting people, going outdoors, and building fun projects.
Midhun Sadanand	Claude Code, AWS, Vercel, OpenAI credits	Fintech, Crypto, ML, Infra	Midhun Sadanand, Yale University Midhun Sadanand is a junior at Yale University studying Computer Science and Economics. At Yale, Midhun is a member of the Yale Debate Association, a graphic designer for Design at Yale, and does Film & Media Studies research. Midhun has worked at Lava, researched spiking neural networks and reservoir computing, co-founded an international college consulting service, and is currently working on Meta, a global neobank. In his free time, he enjoys playing basketball, 35mm film photography, and reading theory.
Mihir Arya	OpenAI compute credits, Cursor compute credits	GTM automation (Rox, Intently), Sales and Ad automation (Vaidi), Market making (Kahai, Dub)	Mihir Arya, University of Michigan Mihir is a CS + Math student at the University of Michigan who loves squeezing performance out of low-level systems and building communities that scale. He's built 2K prof libraries at AMD and real-time recommendation systems at Uber. At Michigan, he co-edits <i>MidMich</i> and leads Community Ops at V.I. Outside tech, he loves playing Bollywood songs on the guitar, hunting for Thai food, and munching Costco peanut butter pretzels.
Mira Yu	Claude code, Devin, Pika	Fintech, consumer tech, civic tech, Kahai, Wipac Flow	Mira Yu, Harvard Mira is a junior at Harvard studying computer science and government. Previously at Hudson River Trading and the Kempner Institute, she's currently building execution infra for Vertex AI agents at Google. On campus, she leads Women in CS and the tech board of the Advocate. Nationally, she's competed in powerlifting and dramatic interpretation. Her interests include sound systems, social engineering, and the optimal cornedbeets from recipe.
Oluwatoni Akintola	OpenAI/API credits	Interested in building in clinical trials/druggable models for drugs and proteins. Also interested in building models that understand and can reason over the commercial real estate market	Oluwatoni Akintola, Applied AI Engineer (intern), Watershed Oluwatoni (Toni) is an engineer passionate about climbing skill curves and persistent personal growth who hopes to become a leader and visionary in the world of technology and entrepreneurship. He has served as the managing director of the Quant Club at Notre Dame, vice president of Notre Dame's CodeStack chapter, and a columnist for the university newspaper. Currently, he's building AI to help the planet get to carbon neutral as quickly as possible. In his free time, he enjoys reading, exercise, and playing basketball. Above all, he is an obsessive learner.
Par Saini	Groq, OpenAI	Video gen/edting, Devtools	Par Saini, Harvard Par is finishing his CS degree at UniforBio while building AI dev tools and computer use agents. Previously he worked at Vertex Ventures and hunts bug bounties in his free time. He helped run Socratica and outside of security work, he loves playing ultimate frisbee and volleyball!
Pearl Natalia	OpenAI/Claude/API credits, ElevenLabs credits	Machine Learning; Pika, Cogpoint AI, Cursor	Pearl Natalia, ML Intern @ The Globe and Mail, UniforBio Pearl is studying Software Engineering at Waterloo and is a building agentic workflows for journalism at The Globe and Mail. She previously worked in health tech, building infra for patient software and palliative care planning. She's also built iOS voice assistants, enterprise agents, AI wearables, and ML for automating web dev. On the side, she's learning tennis, loves to travel, and is studying engineering in Spain this winter.
Pranav Ramesh	OpenAI, Anthropic, Cartesia, Sora, RunwayML	Voice AI	Pranav Ramesh, Harvard Pranav is a senior at Harvard studying Computer Science and Statistics. He previously built finance and sales automation tech at Ramp on the Growth Engineering team, built demos to close enterprise customers at Coframe, and is currently building financial AI tools at Clinika. During the school year, he competes in hackathons, brings won awards at Stanford Treehacks, UPhern PennApps, the AGI House, and more. Outside of software, Pranav is very passionate about venture capital, loves playing pool, and loves photography.
Pranav Wadhwa	OpenAI and elevenlabs	Consumer, fintech, healthtech. Two ideas I'm interested in exploring are simulating consumer behavior research and diagnosing physical injuries through a mobile app.	Pranav Wadhwa, Software Engineer, Cassidy Pranav is a software engineer at Cassidy where he is currently building AI agents and automation workflows. He previously worked at Bloomberg, Squarespace, and other startups, gaining extensive experience across full stack, C#, and AI development. He loves building products that make a real impact and enjoys the energy of fast-moving teams. In his free time, he likes playing basketball and dancing.
Rajan Agarwal	Claude/Gemini Credits, Modal/GPU Credits	Coding agents/ OpenAI Codex/Cogpoint	Rajan Agarwal, Member of Technical Staff, Amazon AGI Lab Rajan is studying Software Engineering at Waterloo and working on RL for multimodal agents at Amazon AGI Lab. Previously, he worked on the first video selling agents at Kino AI and has worked on deep learning, robotics software and building high-performance systems. He has also worked on earthquake simulation RL with governments, led self-driving teams in Waterloo, worked on agent orchestration/simulation, distributed training architecture and more.
Rayna Arora	Claude, copilot	Fashion tech, climate tech.	Rayna Arora, Massachusetts Institute of Technology Rayna is a senior/master's student studying AI at MIT. She's built LegalPulse, a startup to automate time-tracking for lawyers. Rayna has also worked on risk management for Jane Street. In her free time, she designs and sews her own clothes, and she plans to launch a fashion tech startup aimed at making the industry more sustainable.
